Urban Land and Property Markets in The Netherlands Barrie Needham 2018-05-20 Originally published in 1993, Urban Land and Property Markets in the Netherlands provides a detailed explanation of how the land and property markets of the Netherlands work. This book describes the scene extensively and goes deeper to explain the situation in the Netherlands, with commercial real estate being regarded internationally as mature, and offering good

safe investment prospects while other aspects of the land and property markets are unique to that country. The constitutional, economic and social contexts are described and current public policies are explained as they affect property development.

Capital and Labour in Japan Toshiaki Tachibanaki 2000 Toshiaki Tachibanaki and Atsuhiko Taki emphasise several institutional features in Japan which differ from those in Euro-American countries: for example, the permanent employment and seniority system in wages and promotion, the dual structure, Keiretsu transactions, the main bank system, and intercorporate shareholding. This book examines in particular the distinction between long-run and short-run contractual relationships which produced such features. It presents both the positive and the negative evaluations of the factor market. Exploring the similarities and interdependencies between two important and idiosyncratic factor markets in Japan, this book brings data to hand which until now has only been available in specialist journals.
