Yorick's World Peter Caws 1993-04-16 Peter Caws provides a fresh and often iconoclastic treatment of some of the most vexing problems in the philosophy of science: explanation, induction, causality, evolution, discovery, artificial intelligence, and the social implications of technological rationality. Caws's work has been shaped equally by the insights of Continental philosophy and a concern with scientific practice. In these twenty-eight essays spanning more than a quarter of a century, he ranges from discussions of the work of French philosopher Gaston Bachelard, to relations between science and surrealism, to the concept of intentionality, to the limits of quantitative description. A lively mix of history, theory, speculation, and analysis, *Yorick's World* presents a vision of science that includes human history and social life. It will interest professional philosophers and scientists, and at the same time its directness will make it readily accessible to nontechnical readers.

Aesthetics: The Key Thinkers Alessandro Giovannelli 2012-02-16 *Aesthetics: The Key Thinkers* offers a comprehensive historical overview of the field of aesthetics. Eighteen specially commissioned essays introduce and explore the contributions of those philosophers who have shaped the subject, from its origins in the work of the ancient Greeks to contemporary developments in the 21st Century. The book reconstructs the history of aesthetics, clearly illustrating the most important attempts to address such crucial issues as the nature of aesthetic judgment, the status of art, and the place of the arts within society. Ideal for undergraduate students, the book lays the necessary foundations for a complete and thorough understanding of this fascinating subject.

The Palgrave Handbook of Auto/Biography Julie M. Parsons 2020-04-28

In a neo-liberal era concerned with discourses of responsible individualism and the 'selfie', there is an increased interest in personal lives and experiences. In contemporary life, the personal is understood to be political and these ideas cut across both the social sciences and humanities. This handbook is specifically concerned with auto/biography, which sits within the field of narrative, complementing biographical and life history research. Some of the contributors emphasise the place of narrative in the construction of auto/biography, whilst others disrupt the perceived boundaries between the individual and the social, the self and the other. The collection has nine sections: creativity and collaboration; families and relationships; epistolary lives; geography; madness; prison lives; professional lives; 'race'; and social justice and disability. They illustrate the inter- and multi-disciplinary nature of auto/biography as a field. Each section features an introduction from a section editor, many of whom are established researchers and/or members of the British Sociological Association (BSA) Auto/Biography study group. The handbook provides the reader with cutting-edge research from authors at different stages in their careers, and will appeal to those with an interest in auto/biography, auto-ethnography, epistolary traditions, lived experiences, narrative analysis, the arts, education, politics, philosophy, history, personal life, reflexivity, research in practice and the sociology of the everyday. Pull Of History, The: Human Understanding Of Magnetism And Gravity Through The Ages Yamamoto Yoshitaka 2017-12-28 This book seeks to understand what bring to pass the birth of modern physics by focusing upon the formation of the concept of force. This would be the first book to note the important role magnetism has played in this process. Indeed, the force between celestial bodies, before the introduction of the Isaac Newtonian gravitational force, is first introduced by Johannes Kepler by analogy with the magnetic force. Moreover, this book, by concentrating our attention on the magnetism, fully describes the developments and the recognition of the force concept

during the Middle Ages. The detailed description of the Middle Ages and the Renaissance is a strong point of this book. By discussing and emphasizing on the role accomplished by the magnetic force, this book makes clear the connection between the natural magic and the modern experimental physics. This book will open up a new aspect of the birth of modern physics. A SAGA OF SMITHS: AN EPIC FAMILY HISTORY Richard Smith 2018-09-25 This Family History traces the varied fortunes of the Smiths of West Yorkshire. It also examines their connection with other families, including: - The Absaloms of Hampshire and London - The Cardens of Brighton - The Cloughs of Sutton and Crosshills - The Fareys of Skipton - The Fosters of Waterford, Ireland and Birmingham - The Gillinsons of Leeds - The Hastings of Holderness - The Morton's of America - The Myersons of London - The Stamfords of East Yorkshire - The Wilsons of Calderdale A key theme running throughout this History has been the determined use of what could aptly be termed 'survival strategies' by successive generations of Smiths. Their aim was always to bolster a precarious 'respectability' in what was often a harsh and unstable environment. The mass of factual and bibliographical information found within its pages will prove useful to Research Students and Family, Local and Social Historians. Above all, it offers a legacy to inspire both present and future family members
